SPECIFICATION CBS (GRANULE)

Accelerator

Chemical Name

N-Cyclohexyl-2-

benzothiazole sulfonamide

Molecular Formula

$C_{13}H_{16}N_2S_2$

Molecular Structure

Molecular Weight

264.4

Gravity

1.31-1.34

CAS NO.

95-33-0

Specification

Appearance	Powder	Oil-coated Powder	Granule
	Grayish White		
Initial M.P. °C ≥	98.0	98.0	98.0
Loss on Drying % ≤	0.30	0.30	0.30
Ash % ≤	0.30	0.30	0.30
Free Amine % ≤	0.50	0.50	0.50
Assay % ≥	96.0	96.0	96.0
Residues(150µm) % ≤	0.10	0.10	--
Oil Content %	--	1.0-2.0	--

Packing 25 kg/bag

Storage Life 24 Months

Properties

Soluble in benzene, dichloromethane, carbon tetrachloride, ethyl acetate, acetone, slightly soluble in ethanol and petrol. Insoluble in water.

Uses

This is a delayed accelerator, with good anti-scorching quality, as well as short vulcanizing duration, which would improve the tensile stress of vulcanization. Minor discoloration, no blooming, antioxidant quality of vulcanization is superior. When applied, adding zinc oxide and stearic acid are necessary to strengthen the effect of TMTD, TMTM, ZDMC, DPG or other alkaline accelerators that are used as second accelerator, as well as being activated by MBT and MBTS.
